Advanced ROOT Workshop
by Tony Kwan

ROOT is data analysis software. Created by CERN, it is particularly useful for **particle physics**, but can also be used in **astronomy** and **data mining**!

Topics include:

- Reading in and writing out data tables;
- Reading in and writing out n-tuples;
- Applying corrections to data;
- Professional plots (error bands, ratio panels, etc.)!

Monday 19th November 4-6pm in the Boardroom, Rutherford Physics Building
